SUMMARY

Senior C++ Engineer with 13+ years of game development experience, including 2+ years focused on C++: performance-critical systems, ECS architecture, large legacy codebases, and client-server features.

Most recently developed core C++ gameplay systems for Homescapes (600M+ installs), including an ECS engine migration that improved frame rate by up to 21-40% in 4 days, and internal debugging/development tooling.

Backend/client-server integration and infrastructure experience spanning CI/CD pipelines, Docker, and AWS - including an analytics service handling 100 GB/day at 8K peak RPS across 5 TB of Postgres storage.

Actively designs AI-assisted development workflows for specification, planning, implementation, validation, and code review.
