

# Konstantin Khitrykh

## Senior Software Engineer

Novi Sad, Serbia · konhit@gmail.com · +381 62 9750 407 · github.com/KonH · linkedin.com/in/konhit

### SUMMARY

Senior Software Engineer, 13 years in game development: ~10 years Unity/C# (7 hands-on, 3 leading as CTO), 2+ years C++/Lua on a large custom engine, and 6 years of backend/infrastructure alongside them (.NET/ASP.NET Core, Java/Kotlin, PostgreSQL, AWS, CI/CD).

Shipped gameplay and meta systems for Homescapes (600M+ installs, 11 features across 4 feature teams), took Cooking Craze from prototype to worldwide release (50M+ installs), and worked as a hands-on CTO over 8 titles (60M+ installs).

Strongest in architecture (a shared modular codebase reused across titles), performance (ECS engine migration for a 21-40% frame-rate increase; memory, GC and draw-call tuning) and infrastructure (TeamCity CI/CD, cloud backends, a custom analytics service at 8K peak RPS), with an uncommon mix of deep Unity/C# and production C++ engine work. Uses AI tooling daily - Claude/Cursor/Codex, maintains skills to write and review code, developed an AI-first approach for a Unity + ECS grand-strategy game (github.com/KonH/GlobalStrategy).

After three years as a hands-on CTO, deliberately returned to an individual contributor role at Playrix (top-3 mobile game studio) to work on Homescapes, a top-10 grossing title in the US. I value that leadership background, but my passion lies in hands-on development: I am looking for a strong team where I can apply my game development and AI-assisted engineering experience to solve complex technical challenges.

### SKILLS

**Unity:** C#, Unity UI, UI Toolkit, AssetBundles/Addressables, Profiling/optimization (CPU/memory/GC), Editor tooling, ScriptableObjects, IL2CPP, Unity Test Framework, SDK integration

**C++:** C++20, STL/templates, EnTT ECS, CMake, Memory management, Build-time optimization

**AI Tools:** Anthropic Claude, Cursor AI, OpenAI Codex

**Backend/Web:** C#, ASP.NET Core, Java/Spring, JS/TS, PostgreSQL

**Infrastructure:** CI/CD, Docker, AWS, TeamCity, Kotlin, Python

### EXPERIENCE

#### Senior C++ Engineer

May 2024 - Aug 2026

**Playrix:** #3 mobile game company · 100M+ MAU · 2.3B installs, 12 titles | Novi Sad

- Worked on Homescapes (iOS, Android) - 600M+ installs and a historically top-10 grossing title in the US on App Store and Google Play
- Contributed to 11 gameplay and meta features across 4 feature teams, including 8 server-backed, social, or competitive features
- Developed core gameplay systems in C++ and Lua: cooperative and competitions events, end-of-content event, ECS systems for Merge3 event, player profile
- Used C++20, STL and templates, CMake, memory management, and build-time optimization throughout the codebase
- Implemented an ECS engine migration using EnTT, improving frame rate by up to 21-40%, in 4 days
- Implemented client-side server integration for clan quests, card transfers, player profile and competitions, including request/response flows, state synchronization and error handling
- Designed and improved Cursor/Claude skills and development rules for feature prototyping and code review; a reusable feature-portal template helped reduce prototype lead time from months to weeks
- Improved the Figma-to-engine UI pipeline, reducing production-ready layout integration from hours to minutes
- Integrated and adapted features from other Playrix projects into a large legacy C++ codebase and internal engine
- Built and extended internal development/debugging tools, including ECS Viewer, editor presets, a player support service and gameplay cheats

Chief Technology Officer (hands-on)

Jan 2021 - May 2024

Matryoshka Games: 80M+ installs, 10 titles | Novi Sad

- Hands-on technical leadership across Cooking Craze, Cooking Live, Rescue Dash, and 5 other projects (60M+ installs across iOS, Android, web, Windows, and macOS): set technical direction, led tech leads, and kept building tooling, SDKs, and services myself
- Developed custom Unity editor extensions, debugging tools, and a ScriptableObject-based configuration framework to simplify day-to-day development
- Planned & developed several custom SDKs, including ads and analytics (Unity/C#, Java, C++)
- Implemented new analytics service to cut Amplitude costs - 100 GB traffic/day, 8K peak RPS, 5 TB Postgres storage
- Implemented a TeamCity/Kotlin CI/CD pipeline to accelerate delivery to QA and multiple app stores
- Investigated IL2CPP compilation behavior and applied findings to improve runtime performance
- Evaluated and introduced UniTask-based async/await, NUnit and Unity Test Framework testing, and Roslyn-based compilation analysis across development teams
- Promoted SOLID principles, particularly dependency injection, to decouple game logic and improve maintainability and testability
- Supported infrastructure - Docker, AWS EC2, ECS, SQS, CloudWatch, distributed self-hosted build agents
- Reduced content-delivery costs by evaluating and adopting a better-fit CDN solution
- Focused on eliminating developer pain points in tooling, processes, and architecture to accelerate feature development
- Technology leadership - code review, new solution analysis & prototyping, shared codebase management
- Management - performance reviews, tech leads management, tech interviews

Senior Unity/C# Developer

Apr 2018 - Dec 2020

Matryoshka Games · Novosibirsk

- Led Unity development on Cooking Craze (50M+ installs) from soft launch to worldwide release, expanding the game to web, Windows, and macOS while improving stability and development scalability
- Used Unity Profiler and native platform tools to identify CPU/GPU bottlenecks, improve frame rate, and reduce draw calls
- Reduced memory usage and GC spikes to improve runtime performance and stability
- Analyzed Crashlytics reports and resolved complex Unity-specific issues to maintain production crash rates within Google Play quality thresholds
- Created custom event system with usage monitoring to prevent memory leaks
- Optimized AssetBundle dependencies to reduce network traffic and loading times
- Built a modular shared Unity codebase using Git submodules and Unity packages, providing the technical foundation for multiple projects and the company's first self-published title
- Integrated BrainCloud for cloud saves, authentication, chat, and leaderboards; migrated hundreds of GB of player data from a legacy Java backend using a safe two-phase migration with long-term fallback retention
- Developed admin tool for f2p game operations - ASP.NET Core, TypeScript
- Introduced CI/CD pipeline prototype with batchmode, terminal and Slack integrations to improve product delivery speed
- Pushed forward code review initiative

Middle Unity/C# Developer

Apr 2016 - Apr 2018

Deus Craft · Novosibirsk

- Served as the primary Unity developer on Cooking Craze (50M+ installs), driving development from initial prototype through soft launch
- Developed core/meta gameplay features and integrated 2D art content into the project using Unity UI
- Optimized draw calls and overdraw to maintain stable frame rates
- Integrated native SDKs and plugins for ads, Facebook, and Crashlytics
- Improved XML configs to support growing content amount and feature set
- Server-side support - Java/Spring
- Developed advanced Unity AssetBundle management and custom content-management tooling
- Implemented a custom incremental build pipeline based on Unity Asset Bundles

Unity/C# Developer | Technical Team Lead

Jul 2013 - Apr 2016

Academ Media · Novosibirsk

- Developed 3D games using NGUI UI framework
- Established development processes and reusable foundations for short-cycle games and applications
- Implemented build pipeline and project template for projects
- Led the development team and established a developer training initiative

EDUCATION

Novosibirsk Institute of Economics and Management — Computer Science, Bachelor's 2009 - 2013
